PT   Novel calcineurin deletion mutant having calcineurin polypeptide sequence
PT   and binding A-kinase anchor proteins, for treating graft rejection
PT   following organ transplantation and T cell-mediated disorders.
XX
PS   Example 9; Col 5-6; 53pp; English.
XX
CC   The present sequence was used in an example to demonstrate that
CC   association of cAMP-dependent protein kinase (PKA) with an anchoring
CC   protein in T cells modulates IL-2 production. A-kinase anchoring protein
CC   79 (AKAP 79) binds both PKA and calcineurin and so co-localises a kinase
CC   and a phosphatase that may regulate flux through a specific signalling
CC   pathway. Calcineurin is a Ca2+/calmodulin-dependent protein phosphatase
CC   which is involved in many intracellular signalling pathways. It
CC   participates in regulation of IL-2 expression following T cell
CC   stimulation in T cells. Calcineurin-binding peptides derived from AKAP 79
CC   may be used to inhibit calcineurin activity in a cell. The peptides are
CC   useful for treating graft rejection following organ transplantation and
CC   for treating T cell-mediated disorders. Calcineurin deletion mutants
CC   which bind AKAP 79 are useful for defining an AKAP 79 binding site, for
CC   stimulating the immune response, stimulating activated T cells for
CC   selected clonal expansion, or for enhancing T cell responses to
CC   experimental stimuli for evaluation of early events in T cell biology and
CC   activation of the immune response

AB   Sixteen 5-substituted-2-formylpyridine thiosemicarbazones were synthesized and tested

for antitumor activity against 5 mouse tumor systems, such as L-1210 leukemia and the Lewis

lung carcinoma. The I, II, and III were extremely potent inhibitors of tumor-derived

ribonucleotide diphosphate reductase and inhibited the synthesis of DNA. At 100 mg/kg/day

i.p., I had a broad spectrum of antitumor activity in addition to a significant cure rate in

L-1210 leukemia.
